

# SanerNow Endpoint Threat Detection and Response (EDR)

SanerNow – Your ‘OS’ for managing and securing endpoints

## Today’s Reality

- **Hundreds of thousands of new digital threats manifest daily**
- **Real-time threat detection technologies are limited and not fully effective**
- **Security is a multi-faceted problem requiring prevention, detection, and response**

## The Challenge

It is critical to minimize the time from when an organization detects a threat to developing an appropriate response. An effective response needs to eliminate the threat and incorporate preventive security measures.

An organization needs to stay alert to signs of new threats, ensure prevention measures are in place, monitor new endpoints and configuration changes, and close the gap between threat detection and response.

Effective endpoint threat detection and response requires a variety of tools, knowledge, and expertise.

## The Solution

**SanerNow Endpoint Threat Detection and Response (EDR)** is a cloud-delivered service that detects on-going attacks within the network and thwarts on-going attacks by blocking or containing the attack. Blocking the execution of an application or executable, killing a process, cleaning registry entries, terminating a network connection, quarantining files, and cleaning up startup folders and temp folders are among the responses available. SanerNow uses in-house developed rules to detect Indicators of Attack (IoA) and Indicators of Compromise (IoC).

## Key Benefits

- ✓ **Early detection of advanced threats**
  - Detect elusive risks, threats and anomalous activity unique to your organization and reduce risk posture
- ✓ **Ensure enterprise forensic-grade response**
  - Flexible platform delivering automated and on-demand response that returns endpoints to a trusted state
- ✓ **Make faster decisions**
  - Validate or dismiss security events as they happen to eliminate chance of missing critical alerts that can be the cause of a potential breach
- ✓ **Deep and trusted visibility into endpoints**
  - Speed detection of new and non-malware threats by providing unmatched visibility into an organization’s endpoints both on and off its network

# SanerNow Endpoint Threat Detection and Response (EDR)

## Key Features & Capabilities

- ✔ Continuously monitor endpoints and provide full visibility into all processes, executables, events, and behavior on endpoints
- ✔ Use in-house built threat intelligence to detect Indicators of Attack (IoA) and Indicators of Compromise (IoC)
- ✔ Collect full endpoint inventories and profiles in minutes with lightweight agent, with no discernible impact on end-user productivity
- ✔ Run queries to check any abnormal behavior or unusual network activity that is symptomatic of an attack
- ✔ Execute array of responses such as blocking the execution of an application or executable, killing a process, cleaning registry entries, terminating a network connection, quarantining files, and cleaning up startup folders and temp folders

*Bring Sanity to your endpoint security and systems management with SanerNow, a SaaS-based solution.*

*Saner Now – one platform, multiple use cases, one solution. Simplify IT security and management. Reduce costs.*
