Always stay audit-ready, and ensure compliance, while minimizing your attack surface

Conventional approaches to compliance audits are no longer effective in helping organizations remain cyber safe.

Organizations are grappling with an ever-escalating threat of ransomware attacks, and the possibility of rising risks due to data breaches and increased attack surfaces. Occasional or periodic system audits are inadequate in the face of this increased threat exposure. The potential downside of a security breach could include fines for non-compliance in protecting sensitive business data, the consequent loss of reputation, and loss in customer trust.

A continuous compliance posture can help ensure alignment to the organization's internal security and policy requirements, as well as standardized industry requirements, and various statutory and regulatory requirements as part of an ongoing process.

A continuous and ongoing compliance posture provides a proactive approach to align regulatory policies and improve cyber hygiene while delivering better audit results.

SecPod SanerNow Compliance Management

The SecPod SanerNow Compliance Management (CM) application is the industry's most comprehensive and effective application, designed ground up to provide an uninterrupted, and preventive approach to keeping your endpoints up to date and safe from attack vectors. The application offers an automated and ongoing approach to detect any non-compliant endpoints and ensures immediate curative steps.

SanerNow CM helps you automate your organization's IT assets' regulatory process and supports several standardized industry requirements, including HIPAA,

NIST, ISO, and PCI, to ensure uniform system policies across all the endpoints. Its powerful agent-server model ensures your endpoints remain policy-constrained, with excellent operation speed and accuracy.

SanerNow reduces the impact of irregularities and complexities in security audit management with its continuous scanning capability, end-to-end visibility, and appropriate security benchmark templates. It also enables rapid and effective remediation of vulnerabilities with its integrated SanerNow Patch Management application.

Benefits of SanerNow Compliance Management

Discover and address configuration drift

Detect non-compliant endpoints precisely by identifying system configuration anomalies with a friction-free and fast compliance scan. It also helps you with rapidly addressing and repairing system misconfigurations and missing configurations.

Be security compliance audit-ready, while aligning to industry and regulatory benchmarks

Achieve optimal cyber hygiene with continuous conformity while aligning to industry and tech standards, including HIPAA, NIST 800-53, NIST 800-171, ISO, and PCI. Also, draw up a personalized security policy and uniformly execute system compliance with the SanerNow CM Application.

Unified and actionable insights with SanerNow console

SanerNow's comprehensive console automatically helps identify and detect any non-compliant endpoints on your network. It also supports compliance patching, vulnerability detections and remediation, endpoint security, and endpoint detection and response with a user-friendly dashboard. The SanerNow panel is integrated with multiple SanerNow Applications like Vulnerability Management, Patch Management, Endpoint Management, Compliance Management, and Endpoint Threat Detection and Response to ensure your IT environment is cyber-healthy.

Cloud-based platform supporting remote devices

With the help of SanerNow's cloud-based console, you can monitor both remote and local endpoint compliance with ease. Moreover, the SanerNow Compliance Management Application also supports the cyber sanitization of all major OS platforms, including Windows, Mac, and Linux.

Easy compliance management & agent-based regulation enforcement to avoid complex security breaches

Scan and identify deviation from standards & detect non-compliant endpoints

SanerNow's efficient agent-based service supports customizable and standard configurations, and helps discover non-standard or deviant endpoints, and provides instant remediation suggestions with actionable insights. It allows for continuous monitoring to detect any system deviations that could result in an increased attack surface due to non-compliance.

Regulate and remediate your compliance requirements

SanerNow CM eases and automates the detection of vulnerable or deviant endpoints with actionable insights for risk remediation. It then enables immediate and preventive remediation by automating the installation of verified vendor updates to address potential risks.

Support all major security standards out-of-the-box

SecPod SanerNow supports all primary security and regulatory standards out-of-the-box, including HIPAA, PCI, ISO, NIST 800-53, and NIST 800-171.

Customize your compliance policy based on available system configurations

SanerNow supports industry-standard requirements on policies and configurations out-of-the-box. Further, it allows for any additional, customized policies and configuration settings to ensure specialized industry or as well as organizational compliance.

Cross-platform OS support

SecPod SanerNow compliance management supports all major OS platforms, including Windows, MAC, and Linux.

Convert compliance status updates into actionable intelligence with insightful and customizable reports

SanerNow CM empowers you to focus on specific compliance updates with customized and insightful reports that can be automated, reducing effort and time spent on ensuring the audit-readiness of your IT environment and systems.

About SecPod

SecPod is leading provider of endpoint security and management solutions. SecPod (Security Podium, incarnated as SecPod) has created revolutionary SanerNow platform and tools that are used by MSPs and enterprises worldwide. SecPod also licenses security technology to top security vendors through its SCAP Content Professional Feed.

The SanerNow Platform

SecPod SanerNow is a Unified Endpoint Security (UES) and management solution that ensures cyberhygiene by automating and orchestrating measures to safeguard your enterprise endpoints from cyber attacks. The major features of SanerNow include,

- Patch Management,
- Vulnerability Management,
- Asset Management,
- Endpoint Management,
- Compliance Management
- Endpoint Threat Detection & Response
