SANERNOW
ENDPOINT MANAGEMENT
Part of Industry’s First Integrated and Automated SanerNow Cyberhygiene Platform

www.secpod.com
Manage and gain control over your enterprise endpoint security

Most businesses are digital today, and growth in business translates into increasing and globally distributed endpoints. Research reports indicate that these endpoints are the first point of attack for threat actors due to several reasons like ease of access, reduced security and controls, irregular surveillance, and the overall undetectability of malicious activity.

Establishing a single-pane-of-glass view across all endpoints, with the ability to monitor and manage them remotely, is critical to ensure adequate security and reduce risk. Managing and automating multiple endpoint requirements like batch software deployment, endpoint updates, troubleshooting, and integration can bring down the TCO by reducing time and friction while ensuring reliability and security.

A frictionless Endpoint Management solution will allow IT decision-makers to optimize the software or hardware usage, set and enforce compliance policies, track device utilization, and much more.

SecPod SanerNow offers an efficient, automated, and advanced solution to manage all enterprise endpoints from a cloud-based single-pane-of-glass console. SanerNow helps automate all day-to-day endpoint management activities with several in-built features and help you achieve complete visibility, control, and seamless troubleshooting.

SanerNow’s advanced endpoint management capabilities include monitoring a wide range of endpoint parameters, analysing system health, remotely troubleshooting endpoint issues, remote software installations or uninstallations, blocking malicious applications or devices, tracking and applying security controls, and much more. SanerNow is known for its device-agnostic user experience via its effortlessly deep integrated endpoint management solution with remote endpoint access, threat detection and remediation, and much more.
Effortlessly manage your endpoints using SanerNow Endpoint Management

Assess and manage your endpoint health with real-time monitoring of 100+ endpoint metrics
Ensure comprehensive visibility across your endpoints with live monitoring of hundreds of endpoints settings and configurations with ease.

Integrate your endpoint management with endpoint security
SanerNow provides you with a unified endpoint management and security approach, enabling you to implement the best cyber hygiene practices from a single window. This approach reduces the friction and complexity of managing endpoints with multiple siloed point solutions.

Ensure effective and efficient management of remote devices
SanerNow’s out-of-the-box deep integrated console with smart, multifunction agents simplifies your endpoint management tasks across all your local and distributed endpoints.

Automate operations on all major OSs from a cloud-based console
Easily automate endpoint management across your heterogeneous OS network from a centralized SanerNow cloud-based console.
Simplified endpoint management with SanerNow’s simple yet powerful Endpoint Management Application

**Easy software deployment with SanerNow’s pre-built software repository**
Schedule and deploy software automatically from available software collections supporting multiple OS and third-party applications from the SanerNow Software Repository. Available out of the box with silent switches, SanerNow enables zero-downtime deployment across endpoints. Additionally, SanerNow supports customised software deployment tasks and uninstalls.

**Keep your endpoints healthy with comprehensive security checks**
Continuously track and monitor all your endpoints, with stringent and regular security checks. Monitor details including antivirus deployments, the status of important system services and files, registry keys, rogue processes, and much more, to harden your system configurations and keep your endpoints healthy.

**Apply strong security controls and strengthen your endpoint security posture**
Tighten the security across your endpoints and execute strong security measures, including enabling firewall policies and other security checks, quarantining or isolating necessary devices or networks, discovering, and protecting sensitive data, and much more.

**Block malicious applications and reduce the attack surface instantly**
Block rogue applications and potential threats with the smart SanerNow agent. SanerNow helps detect all the available apps, allowing you to blacklist or whitelist an App across all endpoints.

**Tune-up systems for better performance**
Improve system performance with regular audits and disk clean-ups, including the purging of unused or rarely used files. Optimize cost and usage with regular maintenance and updates across systems and endpoints.

**Block or disable rogue devices to prevent security breaches**
Disable or block rogue or unauthorised devices from connecting to your network, including USB and other peripheral devices, based on organizational policies or compliance requirements. Implement a strong device control strategy to safeguard your network from unsecured or unauthorized access.
Execute scripts on remote devices
Automate day-to-day endpoint management, including remote execution of scripts to update, manage, or troubleshoot your systems. SanerNow allows you to run scripts like PowerShell, bat, or shell across remote computers from its centralized console.

Extensive reporting and audit logs
Automate and schedule reporting and audits to ensure timely and effective actions to regulate endpoint management.

About SecPod
SecPod is leading provider of endpoint security and management solutions. SecPod (Security Podium, incarnated as SecPod) has created revolutionary SanerNow platform and tools that are used by MSPs and enterprises worldwide. SecPod also licenses security technology to top security vendors through its SCAP Content Professional Feed.

The SanerNow Platform
SecPod SanerNow is a Unified Endpoint Security (UES) and management solution that ensures cyberhygiene by automating and orchestrating measures to safeguard your enterprise endpoints from cyber attacks. The major features of SanerNow include,
- Patch Management,
- Vulnerability Management,
- Asset Management,
- Endpoint Management,
- Compliance Management,
- Endpoint Threat Detection & Response
