SANERNOW FOR

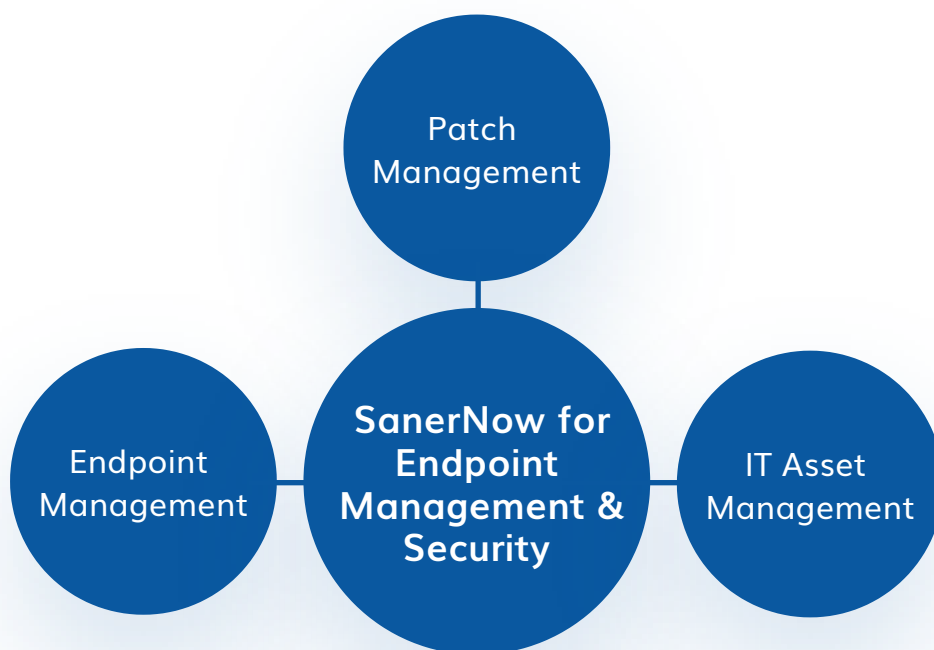

ENDPOINT MANAGEMENT AND SECURITY

www.secpod.com

Endpoints are the enablers of business operations. They are involved in everyday operations and heavily impact the productivity of the entire workforce. Historically, the responsibility of IT has been to manage the IT infrastructure. However, there has hardly ever been a software solution that lets them manage and secure all endpoints from one tool. Legacy solutions are built for specific OSs or devices and force system admins to perform certain management actions either manually or using other solutions.

Today, with remote IT management becoming the international norm, legacy solutions fail to meet the requirements of the workforce. They are outdated, clunky, unintuitive, and usually on-premise. What organizations need today is a comprehensive endpoint management and security solution that lets them manage and secure all devices remotely from the cloud.

SanerNow for Endpoint Management and Security

SanerNow offers a combination of products to offer comprehensive monitoring, endpoint management, and security over all enterprise devices. The following products make endpoint management and security a seamless function: SanerNow Endpoint Management, Patch Management, and Asset Management.

The endpoint management capabilities of SanerNow go beyond traditional features. You can remotely perform all actions through a single cloud-based console. A lightweight agent installed in the endpoints executes all management and security actions seamlessly without any disturbance to end users. The entire lifecycle of all endpoints including workstations, servers, and virtual machines can be collectively managed with SanerNow. Starting from software provisioning, monitoring, device and application control, troubleshooting, establishing security controls, responding to threats, deploying patches, managing IT assets and much more, your endpoint management and security becomes truly complete.

Endpoint Management As Comprehensive As It Can Get

Automate Endpoint Management Operations on All Major OSs from One Cloud-based Console

SanerNow supports management of all major OSs in Windows, MAC, and Linux. Easily automate endpoint management tasks across your heterogeneous OS network from a centralized, cloud-based console.

Manage Endpoint Health with Real-time Monitoring of 100+ Endpoint Metrics

Ensure comprehensive visibility across your endpoints with live monitoring of hundreds of endpoints settings and configurations with ease. Detect an unhealthy endpoint beforehand and improve performance.

One Powerful Agent for All Management and Security Tasks

A single lightweight agent installed in endpoints carries out all management and security tasks in the respective devices. All endpoint management tasks are executed in the background with absolutely no disruption to end-users' productivity

Implement Continuous Monitoring and Management of Devices

The SanerNow platform is built with intelligent continuous monitoring and scanning capabilities. Device status, endpoint metrics, asset scans, missing patches details, threat detection scans, and more are all tracked in real-time to show the live status of your devices.

One Console to Execute Endpoint Management, Patching, and IT Asset Management

SanerNow Endpoint Management

Perform all key endpoint management actions on enterprise devices remotely. Deploy software, monitor endpoint health, apply security controls, execute scripts, perform system tune-ups, block malicious applications and devices, and implement application and device control.

- Deploy software from an in-built software repository of commonly used third-party applications for all OSs
- Monitor 100+ endpoint metrics and perform a wide range of management and security actions.
- Proactively detect and respond to threat vectors

SanerNow Patch Management

Automate the end-to-end tasks of patch management starting from scanning, detection, prioritization, download, testing, and scheduled deployment.

- Patches for all major OS versions in Windows, MAC, Linux, along with 200+ third-party applications
 - Latest patches are made available within 24 hours of release by the supported software vendors
-

SanerNow Asset Management

Monitor and track every hardware and software asset across your network with complete visibility and control. Gain complete visibility over your IT asset inventory and manage them effectively.

- Blacklist or whitelist untrusted or malicious software to ensure security
 - Track and manage software licenses in your asset inventory
-

About SecPod

SecPod is an endpoint management, security, risk, and compliance technology company. SecPod (Security Podium, incarnated as SecPod) has created the revolutionary SanerNow platform and tools that are used by MSPs and enterprises worldwide. SecPod also licenses security technology to top security vendors through its SCAP Content Professional Feed.

The SanerNow Platform

SecPod SanerNow is a cyberhygiene platform that automates and orchestrates measures to safeguard your enterprise devices from cyber attacks. The major applications of SanerNow includes:

- Patch Management
- Vulnerability Management
- Asset Management
- Endpoint Management
- Compliance Management
