“

“SanerNow has enhanced the security posture and reduced the attack window from over 90 days to less than 10 days with its real-time Vulnerability and Patch Management Solution. SecPod team understood IT security better than any other solution in the market. We strongly recommend SanerNow. It enhances productivity, improves security posture, and helps stay compliant in real-time”-

Sminu Mullackel,

Senior Product Manager, **BIZCARTA**

Scale Up your Security Game with SanerNow Advanced Vulnerability Management

SanerNow differentiates your managed service offerings and makes you stand out from the crowd

 Asset Exposure	Continuously monitor hardware and software inventory. Discover rarelyused, outdated, and malicious applications.
 Continuous Posture Anomaly Management	Get holistic visibility of IT infrastructure. Discover and eliminate aberrations, outliers, and posture anomalies, and normalize IT infrastructure.
 Vulnerability Management	Run industry's fastest scans, discover, assess, and prioritize vulnerabilities accurately with home-grown world's largest vulnerability intelligence feed.
 Risk Prioritization	Harness the world's first CISA's SSVC-based Risk Prioritization solution that combines exploitability, business impact, asset context, criticality, and more to rapidly prioritize the risks that matter and remediate them with natively integrated vulnerability mitigation engine.
 Compliance Management	Harden systems and achieve compliance with PCI-DSS, HIPAA, NIST 800-171, 800-53, ISO, and custom policies.
 Patch Management	Remediate vulnerabilities instantly with integrated and automated patch management for Windows, MAC, Linux, and 400+ third-party apps.
 Security Controls	Leverage 100+ security controls and mitigate risks. Install and uninstall software, block applications and devices, stop/start services and processes, manage antivirus and firewall settings, and implement an array of security controls.

Build Profitable Services through SanerNow's Powerful Solutions

Continuous Risk Assessment

Assess vulnerabilities, misconfigurations, posture anomalies, IT asset exposures, and numerous other risks continuously from a centralized console.

Posture Anomaly Management

Discover and eliminate deviations, aberrations, and anomalies in your IT infrastructure that threatens IT security and prevent attacks.

Rapid Risk Prioritization

With millions of security risks, simplify and speed up risk prioritization to rapidly reduce the attack surface and mitigate the risks that matter.

Vulnerability Mitigation

Fix vulnerabilities and security risks on time with integrated and automated patching, and hundreds of security controls.

Security Compliance

Achieve continuous security compliance with popular industry standards like HIPAA, PCI, ISO, NIST, and SOC-2.

System Hardening

Discover misconfigurations and harden systems to tighten security. Leverage necessary remediation controls to fix misconfigurations instantly.

Designed to Meet the Needs of MSSPs

Brand the solution with your logo.

Manage numerous clients from one dashboard with Multi-tenant support.

Leverage auto-generated, ready-to-audit, customizable reports waiting to present to your clients.

Scale endlessly with no compromises. Onboard as many as 25,000 devices and manage them with ease.

Cloud-based deployment to manage distributed endpoints. Choose to host server on Amazon, Google, Azure, and other virtualization clouds.

Onboard SanerNow and install agents in minutes. Kickstart operations and manage vulnerabilities and risks in few minutes.

Utilize affordable and configurable solutions of SanerNow to build profitable services.

Pay as you go model.

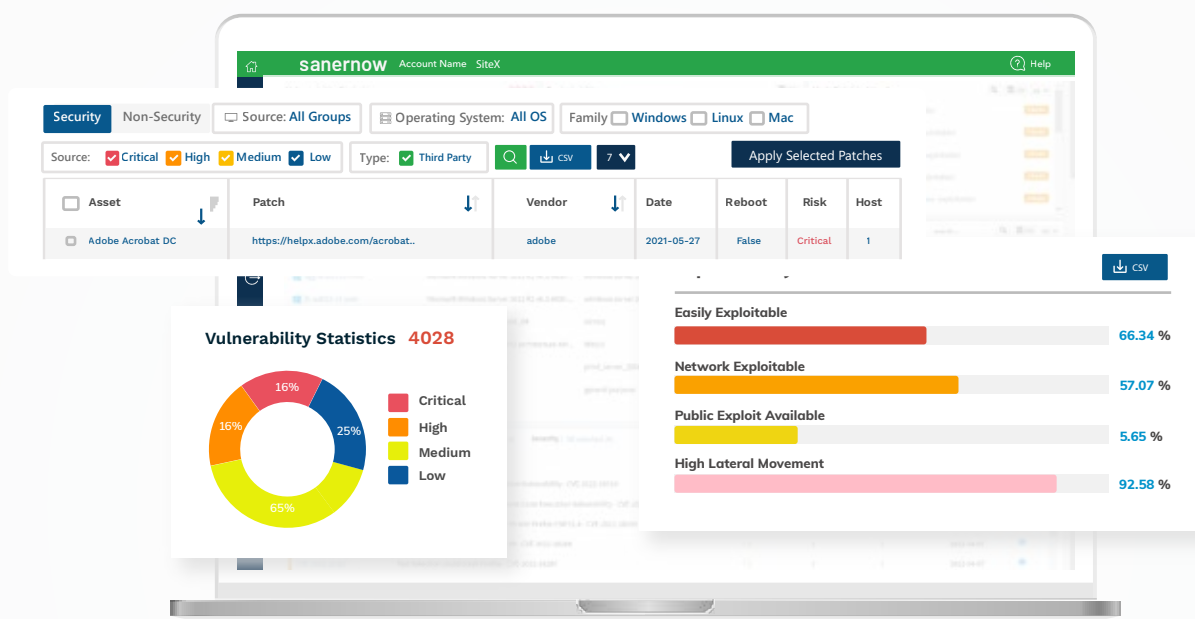

Pre-sales, sales, and technical support for customer development.

Flexible licensing models to meet business needs.

SecPod is a cyber security technology company. We prevent cyberattacks. We do everything to prevent attacks on the computing environment. Our product helps implement cyber hygiene measures so attackers have a tough time piercing through. Our SanerNow CyberHygiene platform provides continuous visibility to the computing environment, identifies vulnerabilities and misconfigurations, mitigates loopholes to eliminate attack surface, and helps automate these routines. Our product philosophy is offering simplicity and automation to make the job of security administrators slightly better
