

SANERNOW

# VULNERABILITY MANAGEMENT

Part of Industry's First Integrated and Automated  
SanerNow Cyberhygiene Platform

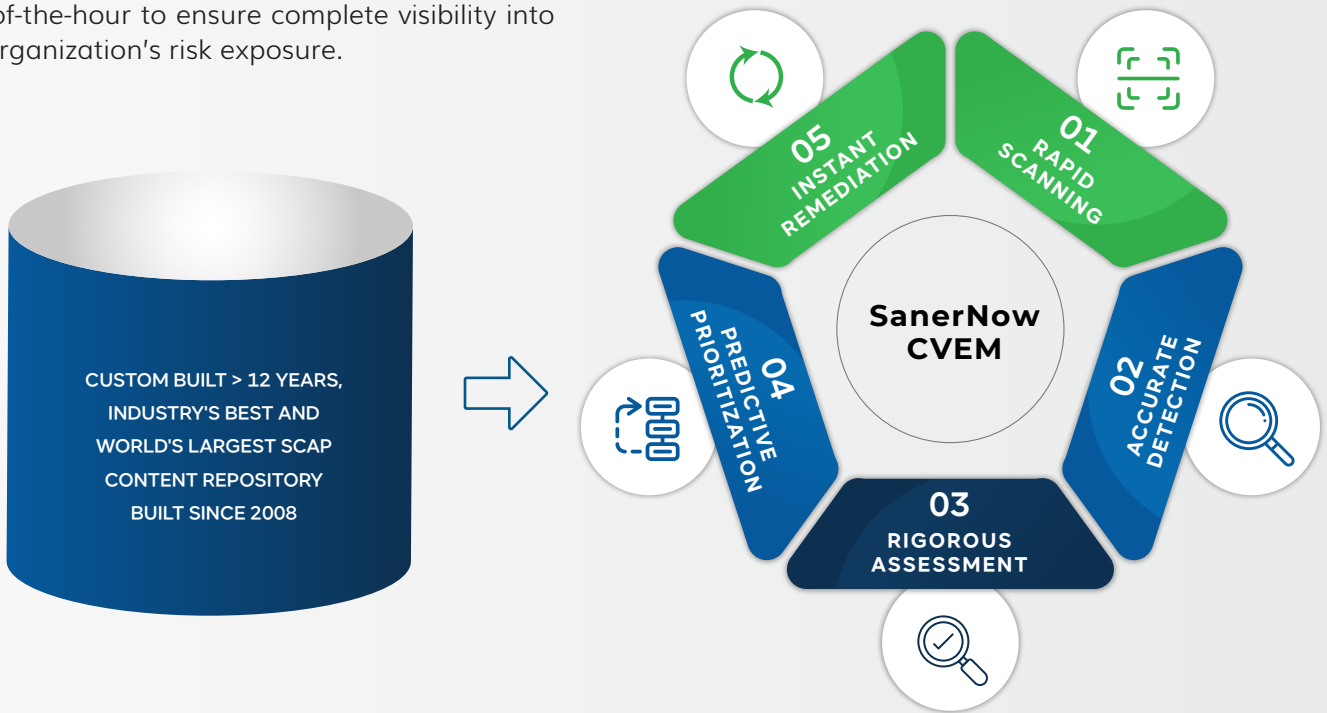

[www.secpod.com](http://www.secpod.com)

# Identify, assess, prioritize, and remediate vulnerabilities rapidly.

To deal with the growing volume and complexity of cyber-attacks today, your security landscape needs a modern approach.

Traditional approaches with periodic vulnerability management practices are no longer effective. A continuous, always-on approach is the need-of-the-hour to ensure complete visibility into your organization's risk exposure.

Where even a slight delay in vulnerability detection or remediation might lead to serious security escalations, you need rapid vulnerability detection and remediation to identify and eliminate risks, and reduce threat exposure.

## SecPod SanerNow Vulnerability Management

The SecPod SanerNow Vulnerability Management (VM) application provides the industry's fastest, most accurate, always-on, and continuous solution to help you achieve Continuous Vulnerability and Exposure Management in your enterprise.

We help you automate your exposure and vulnerability management processes end-to-end, from vulnerability scanning, detection, assessment, and prioritization, to remediation. SanerNow VM operates on an intelligent agent-server model to provide you with unparalleled speed, scalability and accuracy. What is more, the SanerNow Agent functions as a single point for management of several of your endpoint management and security operation needs.

SanerNow reduces the complexity of a conventional vulnerability management system and approach through its rapid scanning abilities, vast and accurate detection checks, thorough assessment and prioritization technique, and remediation through integrated patching.

SanerNow VM can be orchestrated from a centralized cloud-based console to monitor and manage all your heterogeneous OS endpoints remotely.

SanerNow is trusted to help mitigate and manage risks by organizations spanning startups to large enterprises world-wide, including OmniStruct and Ruvos for its unique approach to Vulnerability Management and advanced capabilities.

# Benefits of SanerNow Vulnerability Management

## Fastest-ever comprehensive and accurate vulnerability scanning (less than 5 minutes)

Detect the vulnerabilities, exposures, anomalies & other security risks in your organizational assets in less than 5 minutes with the industry's most comprehensive and rapid scanner.

## Built on the world's largest SCAP repository with over 175,000+ vulnerability checks

Our custom-built SCAP feed with over 175,000+ vulnerability checks precisely scans and identifies vulnerabilities, exposures, anomalies, misconfigurations, and other risks to secure your endpoints.

## Reduced risk exposure with integrated and automated patch management

An integrated patch management approach to identify, prioritize, and remediate risks instantly from the SanerNow unified dashboard.

## Precise vulnerability detection with a lightweight and multi-function agent

Lightweight agents at your endpoints continuously monitor your systems to detect and remediate risks with limited bandwidth consumption.

# Orchestrate seamless vulnerability management with our distinctive features

## Rapid and Continuous Vulnerability Scanning

Scan and detect the vulnerabilities, exposures, and other risks in your organizational devices in less than 5 minutes with SanerNow's custom-built, efficient, and intelligent scanning algorithm. Run this scan continuously to gain real-time visibility and control of your attack surface.

## Integrated and Automated Patch Management

Remediate software vulnerabilities instantly using Saner Now's integrated patch management approach. Automate the remediation process across your network landscape supporting Windows, Mac, Linux, and other third-party applications.

## Perimeter-less Vulnerability Management from the Cloud

Efficiently manage vulnerabilities across your network with a single, centralized, cloud-based console. SanerNow delivers an effective remote vulnerability management approach for globally distributed organizations.

## Identify High-Risk Vulnerabilities with Accurate Prioritization

Use SanerNow Risk Prioritization to thoroughly assess identified vulnerabilities and prioritize them based on their severity level, technical and business impact enhanced EPSS-based algorithm, and SecPod advanced vulnerability intelligence.

## Gain 360-degree Visibility with Insightful Dashboards

Ease discovery based on severity, age, device type, and exploit potential level with SanerNow's continuous next-gen Vulnerability Management. Stay ahead of the threat curve and view and eliminate risks with SanerNow's unified dashboard.

## Instant Vulnerability Management through intelligent Agent-Server Model

Establish a live connection with the server and instantly detect new vulnerabilities, exposures, misconfigurations, and other risks with Saner Now's intelligent agent-server model. The lightweight, powerful agents installed in the endpoints allow you to immediately remediate vulnerabilities based on the severity, thereby reducing your risk exposure.

## Predictive Analysis of Possible Vulnerability Exploits

Predict the probability of new exploits and establish your vulnerability risk by detecting details, including historical occurrences.

## Comprehensive Reports with Customization

Get immediate access to the set of standardized reports with vulnerability details classified based on their type, severity, available device count, exploitability, remediation status, etc. These reports can also be customized based on the organization's needs.

## About SecPod

SecPod is a cyber security technology company. We prevent cyberattacks. We do everything to prevent attacks on the computing environment. Our product helps implement cyber hygiene measures, so attackers have a tough time piercing through. Our SanerNow Cyber Hygiene Platform provides continuous visibility to the computing environment, identifies vulnerabilities and misconfigurations, mitigates loopholes to eliminate attack surface, and helps automate these routines. Our product philosophy is offering simplicity and automation to make the job of security administrators slightly better.

## The SanerNow Platform

SecPod SanerNow is a Unified Endpoint Security (UES) and management solution that ensures cyberhygiene by automating and orchestrating measures to safeguard your enterprise endpoints from cyber attacks. The major features of SanerNow include,

- Patch Management,
- Vulnerability Management,
- Asset Management,
- Endpoint Management,
- Compliance Management
- Endpoint Threat Detection & Response
