# THE SANER PLATFORM

AI-Driven, Prevention-First
Security for Endpoints, Servers,
Network Infrastructure & Cloud

# Eliminate Cyber Risks Well Before They Become Breaches

Cyber threats are evolving rapidly, yet traditional security solutions remain reactive, fragmented, and ineffective against modern attack techniques. Organizations struggle with siloed tools, slow threat detection, and manual remediation, leaving security gaps open for adversaries to exploit.

The Saner Platform by SecPod takes a fundamentally prevention-first approach by delivering continuous, automated, and AI-fortified security across endpoints, servers, network, and cloud. It delivers complete security visibility, automates remediation, and enforces compliance thus eliminating risks and threats before they can cause damage.

**This unified platform includes:**

## Saner Cloud

An AI-fortified **Cloud-Native Application Protection Platform (CNAPP)** that delivers continuous visibility, security compliance, and risk mitigation for cloud environments.

## Saner CVEM

A **Continuous Vulnerability and Exposure Management (CVEM)** solution that delivers continuous visibility, identifies, assesses, and remediates vulnerabilities across enterprise devices and network infrastructure.

Together, they provide enterprises with advanced, automated, and scalable security, replacing siloed security tools with a unified platform that ensures proactive risk elimination rather than reactive response.

# The Problem: Why Traditional Security is Failing

Cybersecurity solutions have remained largely unchanged for decades, leaving organizations vulnerable to sophisticated attacks. Traditional tools suffer from:

| Security Challenges | | Organizational Impact |
|---|---|---|
| **Fragmented, Siloed Security** | ⇨ | Disjointed tools for endpoints and cloud create blind spots, increasing security gaps. |
| **Delayed Threat Detection** | ⇨ | Security risks remain unaddressed for weeks or months, leading to breaches. |
| **Lack of Risk Context** | ⇨ | Tools detect vulnerabilities but fail to prioritize real-world threats based on exploitability. |
| **No Integrated Remediation** | ⇨ | Alerts without remediation lead to manual intervention, increasing response time. |
| **Compliance Complexity** | ⇨ | Ad-hoc security controls make it difficult to adhere to frameworks like NIST, HIPAA, PCI DSS. |
# The SecPod Solution
# Prevention-First Cyber Hygiene

The Saner Platform addresses these challenges by delivering real-time security visibility, automated risk prioritization, and true remediation across endpoints, servers, network, cloud, and workloads.

# Key Components of The Saner Platform

➡️ **Saner CVEM:** Continuous Vulnerability & Exposure Management for Endpoints and Network Infrastructure

## Unified Risk Management: Beyond Just Vulnerabilities

Traditional vulnerability management solutions focus solely on software vulnerabilities, missing misconfigurations, security deviations, and exposures. Saner CVEM eliminates this limitation by detecting and remediating all security risks over a single console.

| | | |
|---|---|---|
| ✓ | **Identify & Remediate Vulnerabilities** | Continuous, automated scanning across all IT assets. |
| ✓ | **Detect Misconfigurations & Exposures** | Secure system configurations to prevent any exploitability. |
| ✓ | **Monitor Hidden IT Assets & Deviations** | Gain absolute control over your security posture. |

## Industry's Fastest & Continuous Scanning

✓ **Run vulnerability scans in under 5 minutes,** ensuring real-time detection of potential threats.

✓ **Eliminate security blind spots by** continuously assessing all endpoints, servers, and network devices.

## AI-Powered Risk Prioritization

✅ **190,000+ security checks** backed by the world's **largest vulnerability and threat intelligence database.**

✅ Advanced risk scoring based on **exploitability, business impact, and real-world attack likelihood.**

## True Remediation with Integrated Patching

✅ **Automated patching and security fixes** for operating systems, third-party applications, misconfigurations, and go-beyond patching remediations.

✅ **One lightweight, multifunctional agent** performs all security tasks, eliminating **the need for multiple tools.**

## Compliance Automation & System Hardening

✅ Continuous compliance monitoring with frameworks such as **NIST HIPAA, PCI DSS, CIS, SOC 2.**

✅ Automated enforcement of security policies **to prevent compliance violations.**

**→ Saner Cloud:** AI-Fortified CNAPP

## AI-Native Cloud Security & Risk Prioritization

✓ **Real-time detection & remediation** of cloud misconfigurations, security drifts, and policy violations.

✓ **Context-aware threat prioritization** to focus on critical vulnerabilities.

## Cloud Security Posture Management (CSPM)

✓ Automated enforcement of security controls across **AWS, Azure, and hybrid cloud environments.**

✓ Continuous assessment and remediation of misconfigurations.

## Cloud Identity & Entitlement Management (CIEM)

✓ **Enforce least-privilege access controls** to prevent unauthorized cloud access.

✓ **Detect privilege misuse and over-provisioned identities** that increase risk exposure.

## Unified Security for Cloud, Endpoints, & Workloads

✅ **Comprehensive protection** across cloud workloads, containers, and identities from **a single platform.**

## Automated Remediation: Not Just Alerts

✅ **Fixes security gaps automatically** instead of just generating alerts.

✅ Integrated **patching, configuration management, and policy enforcement** to reduce human effort.

## Advanced Cloud Workload Management

✅ **Real-time monitoring and anomaly detection** to prevent cloud-native threats.

✅ Auto-patching and zero-trust security enforcement across workloads.

# Enterprise Grade Benefits

## Comprehensive Prevention-First Security

**360° security visibility** across endpoints, workloads, and cloud environments.

**AI-driven risk prioritization** to address the most critical vulnerabilities first.

## True Remediation

**Integrated patching & automated fixes** reduce remediation time from weeks to minutes.

**True remediation beyond alerts —** no need for manual intervention.

## Advanced, Seamless Multicloud Protection

Unified security across AWS, Azure, and multiple hybrid infra-structures.

Eliminates security silos with **one centralized security platform.**

## Lower Operational Costs & Complexity

**One powerful, lightweight agent for** all security tasks — no need for multiple tools.

**Reduces false positives** and enhances security team productivity.

## Effortless Compliance & Governance

Automated compliance enforcement for NIST, HIPAA, PCI DSS, CIS SOC 2.

**Security posture scoring and risk-based reporting** for audits and executive insights.

# One Unified Solution for
# End-to-End Security

By integrating Saner CVEM for endpoint security and Saner Cloud for cloud security, SecPod delivers a prevention-first, AI-powered cybersecurity platform that eliminates vulnerabilities before they can be exploited.

Replace your reactive security with continuous, automated, and scalable prevention.
