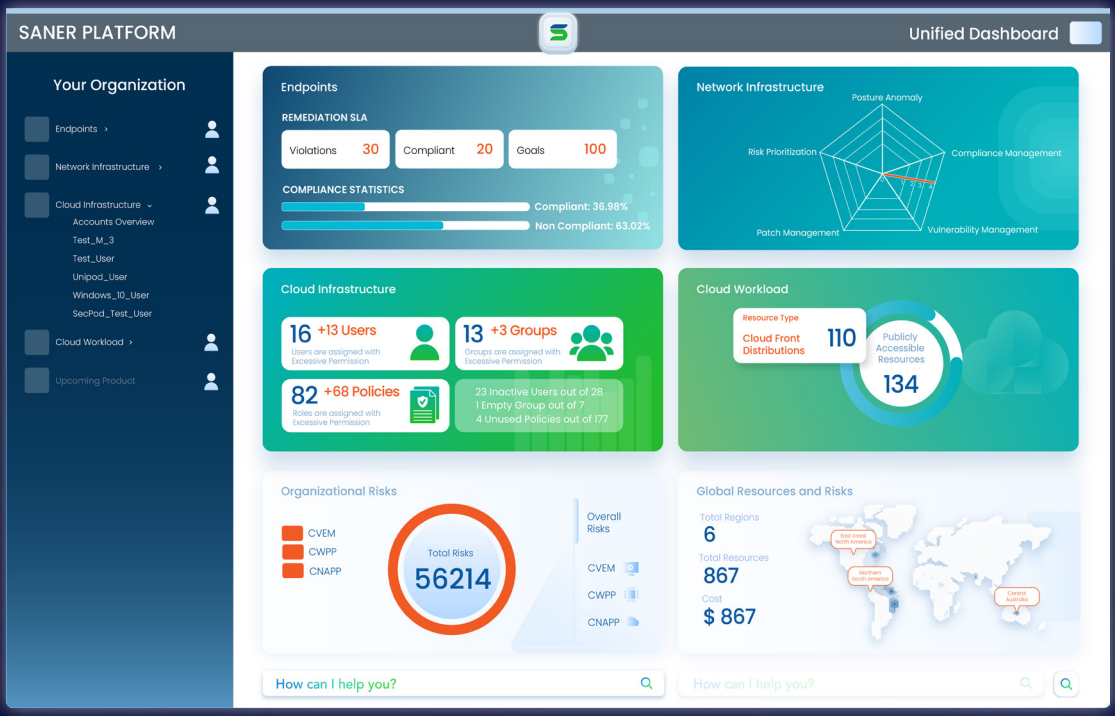
THE SANER PLATFORM



Prevention-first Continuous Vulnerability & Exposure Management and Cloud Security CNAPP Platform

www.secpod.com

Siloed Tools lead to Fragmented Security

Outdated Solutions can't handle Modern Cyberattacks

Modern IT and security teams face mounting pressure as cyber threats grow more advanced and relentless. Further, research suggests that the Mean Time to Remediate Risks is nearly 60 days. Yet, many organizations remain dependent on outdated, fragmented tools that fail to keep pace. These disconnected systems create blind spots, slow down threat detection, and demand heavy manual intervention, leaving teams overwhelmed and risks unaddressed.

Without unified visibility or automated remediation, vulnerabilities, exposures, risks and threats linger for weeks, compliance becomes complex, and attackers gain the upper hand. The result is a constant struggle to stay ahead in a landscape where traditional security tools simply can't keep up.

KEY CHALLENGES

Multiple Solutions and Siloed Interfaces reducing operational efficiency

Delay in Risk Remediation and backlog of vulnerabilities and exposures

Increased attack surface and inability to maintain security compliance

Superficial Visibility to IT with poor insights

Security Risks beyond CVEs are being overlooked

What IT and Security teams need is a fully integrated and unified platform that can automatically manage security risks across infrastructure, be it endpoints, servers, network, and cloud.

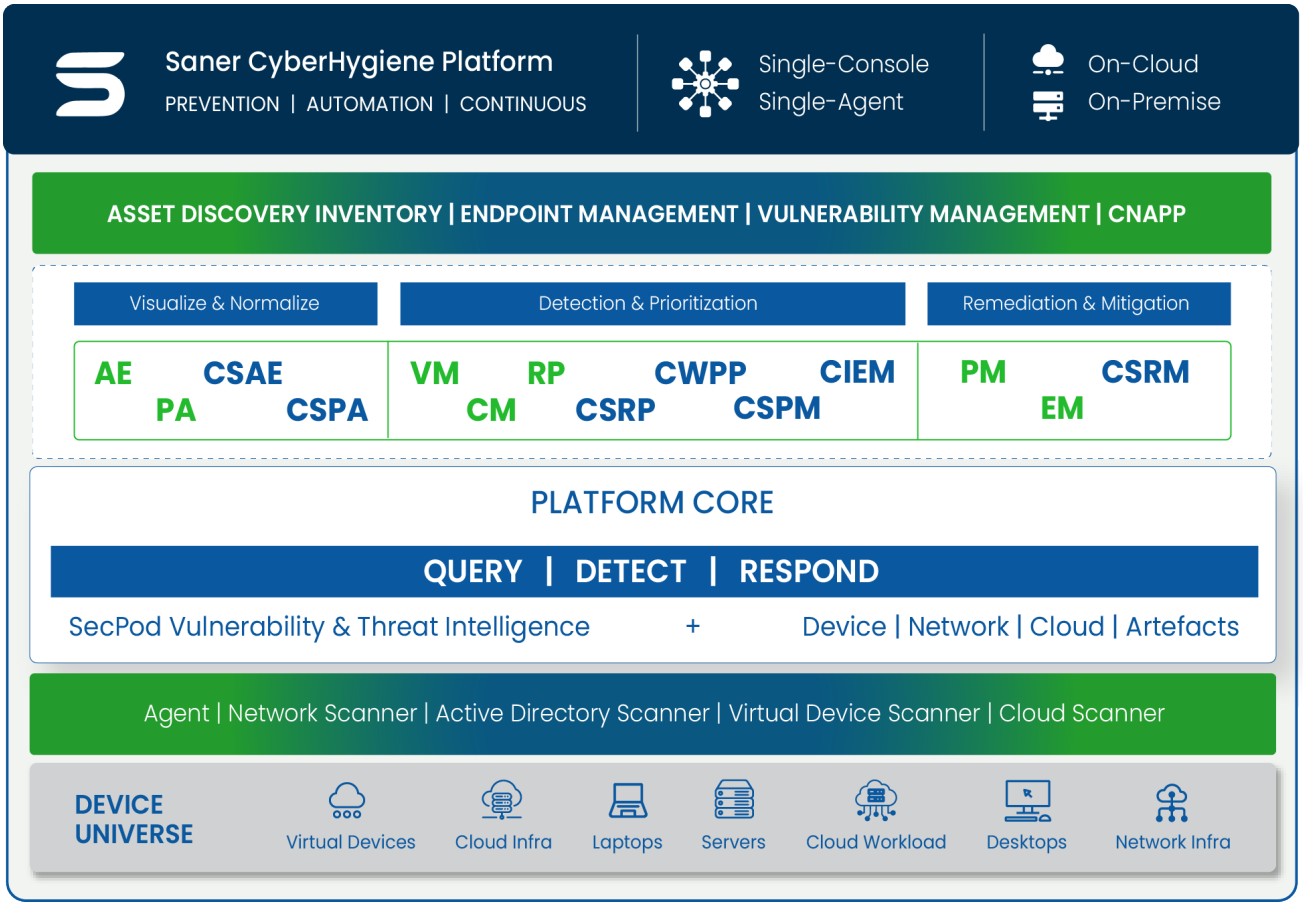
The Saner Platform by SecPod is a fully integrated, automated, and continuous cyberattack prevention platform that combines next-gen vulnerability and exposure management and cutting-edge CNAPP into one single platform to secure across infrastructure, be it endpoints, servers, network, and cloud.

SANER CLOUD

An AI-fortified Cloud-Native Application Protection Platform (CNAPP) delivering continuous visibility, compliance, and risk mitigation.

SANER CVEM

Continuous Vulnerability and Exposure Management for visibility, assessment, prioritization and remediation of risks across devices and infrastructure.



The Saner Platform delivers complete visibility across your infrastructure, automates remediation, and enforces compliance to eliminate risks before they cause damage. Together, they provide advanced, automated, and scalable security—replacing siloed tools with a unified, prevention-focused solution.

Understanding the Saner Platform

Saner CVEM - Continuous Vulnerability & Exposure Management

Manage Vulnerabilities and Other Security Risks Under One Roof

Get a unified view of vulnerabilities, misconfigurations, hidden IT assets, and control drifts from a single console. Gain complete visibility, and act faster with everything in one place.

One Powerful, Lightweight, Multifunctional Agent for All Tasks

Handle discovery, assessment, prioritization, and remediation with one small footprint agent. It transforms into a network scanner, active directory scanner to eliminate multiple agents and minimize hardware spend.

Best-in-Class Security Intelligence for Accurate Prioritization

Tap into 200,000 plus security checks backed by a global vulnerability and threat database. Focus on what matters most with scoring that factors exploitability, business impact, and real-world attack likelihood.

Automation That Puts Risk Management on Autopilot

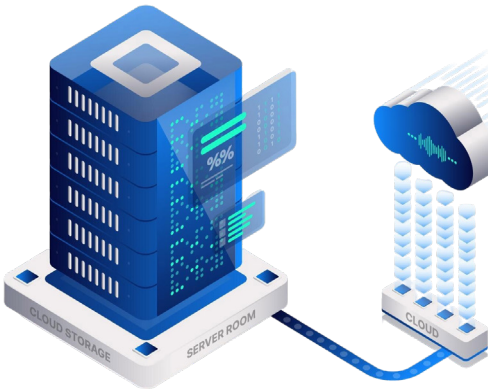
Use machine learning, statistical analysis, and deviation computation to keep risk trending down. Automate detection, patching, configuration fixes, and policy enforcement to free teams from manual work.

Natively Built, Truly Integrated, End-to-End

A fully in-house, tightly integrated platform that connects assessment, patching, and hardening. No fragile glue code, no silos, just smooth workflows from find to fix.

Industry's Fastest, Continuous Scanning

Run complete scans in under five minutes for always-current risk posture. Catch exposures, misconfigurations, shadow assets, and control deviations in near real time.



Compliance and Hardening Made Simple

Continuously monitor and enforce controls mapped to NIST, HIPAA, PCI DSS, CIS, and SOC 2. Generate audit-ready evidence, strengthen baselines, and reduce review cycles.

Understanding the Saner Platform

Saner Cloud – AI-fortified CNAPP

Unified visibility of Cloud Assets and Risks with CSAE

Replace fragmented views with complete context across accounts, regions, and workloads. Further, monitor misconfigurations, drift, policy violations, identities, and entitlements across clouds from a single pane.

Context-Aware, AI-Driven Prioritization with CSRP

Rank risks by exploitability, impact, and business impact along with CISA SSVC's prioritization. Tackle the most dangerous issues first to shrink the attack surface quickly.

CSPM for AWS, Azure, and Hybrid Environments

Continuously assess configurations, enforce guardrails, and remediate at scale. Standardize controls across multi-cloud and hybrid infrastructure without juggling across multiple tools and dashboards.

CIEM for Least-Privilege at Scale

Enforce least-privilege access automatically, detect privilege misuse, and remove over-provisioned identities. Keep permissions tight and don't compromise on security.

CSRM for Automated Remediation and Policy Enforcement

Fix issues, patch workloads, and apply configuration changes directly from the platform. Close gaps automatically instead of just alerting on them.

Advanced Cloud Workload Management with CWPP

Gain real-time monitoring and anomaly detection for containers. Proactively assess and holistically manage workloads continuously, automatically, and effectively.

Simplified Compliance and Reporting

Map, monitor, and enforce frameworks like NIST, HIPAA, PCI DSS, CIS, and SOC-2. Share posture scores and risk-based reports with auditors and executives, with minimal efforts.

Enterprise-Grade Benefits of Saner Platform at a Glance

>90%
Reduction in Attack Surface

>60%
Reduction in Mean Time to Remediate

>95%
Patch compliance within first month

Unified Visibility Everywhere

See endpoints, servers, workloads, and cloud risks from one console. Eliminate silos and spot gaps before they spread.

AI-driven, Context-aware Prioritization

Rank issues by exploitability, business impact, and real-world attack prediction. Focus teams on the few risks that matter most.

Reduced MTTR with True Remediation and Automation

Auto-patch OS and apps, fix configs, and enforce policies from the same platform to rapidly reduce time to fix risks. Close gaps automatically instead of just alerting.

Enhanced Security Effectiveness with Seamless Operations

Unify security operations and reduce manual workload with one platform. Leverage native integration and automation to boost security efficiency without disruption.

Compliance Made Simple

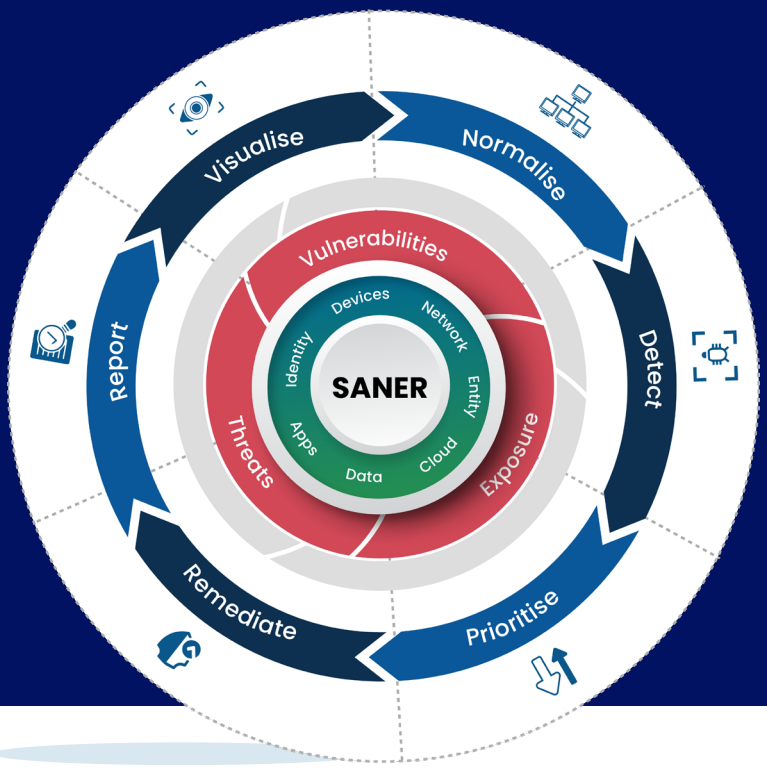
Continuously monitor and enforce controls for NIST, HIPAA, PCI DSS, CIS, and SOC 2. Generate audit-ready evidence and executive-ready reports.

Reduced Operational Complexity and TCO

Use a single agent that centralizes workflows for simplified operations. Reduce tool sprawl, false positives, and operational effort along with total cost of ownership of tools.

Saner Platform

The Saner Platform is based on SecPod's Prevent Framework. The Prevent framework goes beyond addressing vulnerabilities; it changes our approach to cybersecurity at its core. With the framework, we help you focus on removing the root causes of attacks rather than reacting to the attack itself.



380,200
Total number of Risk Exposures covered

81855
Total Vulnerabilities Covered

1143
Publicly Known Exploit Kits Covered

200+
Posture Anomalies Uncovered

24-48 hrs
Speed at which New Vulnerabilities are covered

30000+
Misconfigurations covered

552
Third-party Applications

1189
Platforms & Products Supported

> ***Flawless vulnerability and risk detection, patching, prioritization, AND patch automation. Very intuitive interface that makes navigation effortless. Overall, it is a reliable solution that is easy to roll out and manage.***

-- CHIEF TECHNOLOGY OFFICER, LARGE BFSI ENTERPRISE

> ***Saner Platform's risk detection, integrated patch management and automation capabilities make it a solid recommendation from us for anyone looking to manage vulnerabilities across networks easily.***

-- IT MANAGER, MANUFACTURING SECTOR

About SecPod

SecPod is a leading cybersecurity technology company committed to preventing cyberattacks through proactive security. Its mission is to secure computing infrastructure by enabling preventive security posture.

At the core of SecPod's offerings is the Saner Platform - a suite of solutions that help organizations establish a strong security posture to preempt cyber threats against endpoints, servers, network and cloud infrastructure, as well as cloud workloads. With its cutting-edge and comprehensive solutions, SecPod empowers organizations to stay ahead of evolving threats and build a resilient security framework.
